

Oracle EBS Migration to Fusion Cloud

Oracle offers a comprehensive and compelling alternative to existing Oracle EBS installations in form of Oracle Fusion Cloud applications. These applications are future ready and run on Oracle's Gen 2 cloud infrastructure to provide unmatched speed, security and continuity for organisations of any size. Some of the reasons organisations are now looking to migrate to Oracle Fusion Cloud include:

- Flexibility – scaling as the per the business requirements
- Agility – roll out new features faster
- Always up to date
- Significantly lower TCO

KEY BUSINESS BENEFITS

- Scalable
- Agility with new features
- Always up to date version
- Lower TCO
- Migrate Customisations
- Easier integration with other Cloud applications
- Focus on business rather than infrastructure

Challenges

Although some organisations recognise the benefits of adopting Oracle Fusion Cloud applications, they may feel inhibited to make the move due to considerations such as:

- Interfaces and unique extensions
- Security
- Change management

Value Proposition

Global Minds has developed a unique methodology for migration to Fusion comprising of a set of processes and tools that fully address all such customer concerns.

Starting from the current business function mappings to Cloud ERP, EPM, HCM, SCM, and CX, the methodology involves a comprehensive analysis of the current customisations, interfaces and reports to provide a migration path using Oracle Cloud Infrastructure which works seamlessly with the Cloud applications.

Global minds has an experienced team of Oracle Cloud certified functional, technical and infrastructure individuals which can engage to quickly draw out a migration path and plan using its fusion migration assessment tool and methodology. Along with the existing Oracle EBS experts, it has built a team of certified architects and professionals in Oracle SaaS, PaaS and IaaS platforms.

With a unique blend of certified and experienced Oracle EBS and Oracle Cloud resources and combined with its migration tools and methodology, Global Minds team can rapidly complete your migration from your current Oracle EBS to Oracle Fusion Cloud.

Migration Approach

The migration team uses the migration assessment tool to evaluate functionality used along with the customizations, interfaces and reports.

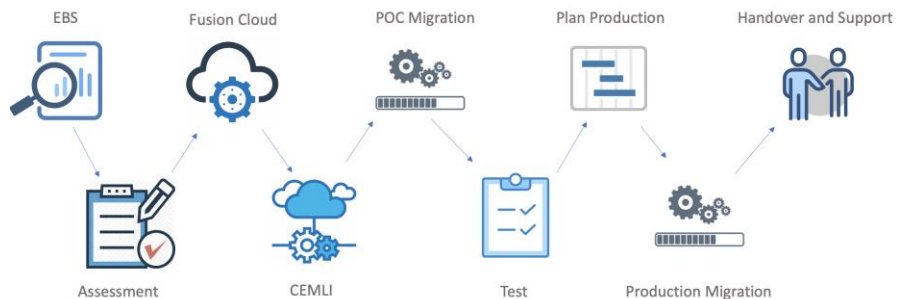

KEY FEATURES

- Proven Methodology
- Quick and Error free
- Migration tool
- Retain all Customisations
- Post migration checklist
- Migrate all Data or Balances
- Specialist team

Based on its findings, the team works closely with the in-house EBS support team to discuss and plan out road map for the migration to Fusion cloud applications.

The Proof of Concept (PoC) phase involves the setting up of a test cloud application environment and migrating the current EBS environment to the fusion cloud applications. CEMLI are converted to cloud using Oracle PaaS product set. Necessary firewall configurations are completed and access to fusion applications is tested along with all existing interfaces and integrations as well as any third-party reporting tools. Business can choose to migrate all EBS Data or just balances.

Post POC stage, the production migration and cut-over are planned and executed. A comprehensive training program is conducted to mitigate change management related challenges.

Throughout the engagement, the migration team works closely with the IT, key business users and the support team to validate the migrated system and enable them to carry on support and maintenance of the fusion cloud application post migration.

Summary

Global Minds can move your current Oracle EBS to Oracle Fusion Cloud in a quick and hassle-free manner using its proven methodology and migration tool set, that includes all EBS data and extensions.

Let us help you to migrate your EBS to Oracle Fusion cloud and unlock the benefits of the latest Fusion Cloud Applications.
